18. Important Compliance & Risk Requirements

1. EXECUTIVE SUMMARY

Volt Trades ni financial ecosystem inayounganisha **Forex education, trading/investment account management, payment/wallet infrastructure, projects na community** katika platform moja.

Website haitakiwi kuonekana kama landing page ya kawaida pekee. Inatakiwa kuwa na sehemu mbili kuu: **Public Website** kwa wageni na **Authenticated Platform** kwa users walioingia kwenye account zao.

Core positioning: Learn Forex. Manage Capital. Explore Opportunities. Build the Future.

Brand promise ya Volt Trades ni kumsaidia user kujifunza, kusimamia account yake, kuona opportunities zilizopo kwenye Trading Floor, na kufuatilia projects za future za ecosystem.

Developer anatakiwa kujenga system kwa namna ambayo modules zinaweza kupanuliwa baadaye bila kubadilisha architecture yote.

2. PRODUCT VISION & CORE MODULES

Modules kuu za Volt Trades:

- **Learn Forex / Forex Academy:** courses, lessons, videos, quizzes, progress na certificates.
- **Trading Floor:** sehemu ya kuonyesha investment/trading opportunities na packages zinazoweza kusanidiwa na admin.
- **Account Management:** user anaona balance, portfolio, investments, transactions, deposits na withdrawals.
- **Projects:** future plans za Volt Trades kama shop, technology projects na other ventures.
- **Volt Society:** community ya watu wenye dreams, ambition na hunger for success.
- **Payments:** deposits, course purchases, investment funding, withdrawals, payment status na transaction ledger.
- **Admin:** complete control ya content, users, courses, packages, projects, payments, compliance na reports.

3. WEBSITE INFORMATION ARCHITECTURE

Main navigation ya public website:

```
VOLT TRADES
■■■ Home
■■■ Learn Forex
■ ■■■ All Courses
■ ■■■ Beginner
■ ■■■ Intermediate
■ ■■■ Advanced
■ ■■■ Course Details
■■■ Trading Floor
■ ■■■ Overview
■ ■■■ Opportunities / Plans
■ ■■■ How It Works
■ ■■■ Risk & Disclosure
■■■ Projects
■ ■■■ All Projects
■ ■■■ Volt Shop
■ ■■■ Volt Society
■ ■■■ Future Roadmap
■■■ About
■■■ Blog / Insights
■■■ Contact / Support
■■■ Login
■■■ Register
```

Authenticated user navigation:

- DASHBOARD
 - ■ ■ ■ Overview
 - ■ ■ ■ Learn Forex
 - ■ ■ ■ My Courses
 - ■ ■ ■ Course Library
 - ■ ■ ■ Progress
 - ■ ■ ■ Certificates
 - ■ ■ ■ Trading Floor
 - ■ ■ ■ Explore Opportunities
 - ■ ■ ■ My Investments
 - ■ ■ ■ Investment Details
 - ■ ■ ■ Accounts
 - ■ ■ ■ Wallet
 - ■ ■ ■ Trading Accounts
 - ■ ■ ■ Investment Accounts
 - ■ ■ ■ Transactions
 - ■ ■ ■ Projects
 - ■ ■ ■ Volt Society
 - ■ ■ ■ Notifications
 - ■ ■ ■ Support
 - ■ ■ ■ Settings

4. PUBLIC WEBSITE PAGES & LINKS

Kila link lazima iwe na destination page halisi. Hakuna button ya CTA inayobaki bila action.

Route	Page	Main purpose
/	Home	Brand introduction, main CTAs, features, featured courses, Trading Floor preview na projects.
/learn	Learn Forex	Course catalogue yenye filters, prices, level na CTA ya view course.
/courses/:slug	Course Details	Full course description, benefits, curriculum, price na Buy Course.
/trading-floor	Trading Floor	Overview ya opportunities, packages, how it works na disclosures.
/trading-floor/:slug	Opportunity Details	Details, amount, terms, risk, projected/target metrics na Invest CTA.
/projects	Projects	Future projects na roadmap.
/projects/:slug	Project Details	Detailed information kuhusu project, status, milestones na updates.
/volt-society	Volt Society	Community vision, benefits, membership CTA.
/about	About	Mission, vision, company story na team.
/blog	Blog	Forex, finance, education na company updates.
/contact	Contact	Support form, FAQs na contact channels.
/login	Login	User authentication.
/register	Register	Create account.
/terms	Terms	Terms of service.
/privacy	Privacy	Privacy policy.
/risk-disclosure	Risk Disclosure	Trading/investment risk disclosures.

5. FOREX ACADEMY

Purpose: kuuza na kutoa elimu ya Forex kwa mfumo wa structured learning.

Course card lazima ionyeshe: title, level, short description, learning outcomes, duration, lessons count, price, rating/reviews (optional), na CTA.

Course detail page: hero section, what the learner will learn, course benefits, curriculum, instructor, FAQs, price, payment CTA na access rules.

Example course levels:

- Beginner — Forex Foundation
- Intermediate — Technical Analysis
- Advanced — Professional Trading & Strategy
- Premium — Complete Forex Mastery

Course purchase flow:

```
Visitor → View Course → Buy Course → Login/Register  
→ Checkout → Payment → Payment Verification  
→ Course Access Granted → My Courses → Learn → Progress Saved
```

Course access iwe controlled na database. User asipolipa, asipate premium content. Admin aweze ku-set free, paid, discount, coupon na lifetime/time-limited access.

6. TRADING FLOOR & INVESTMENT SYSTEM

Trading Floor ni sehemu ya core business ya Volt Trades. Inapaswa kuwa configurable: admin anaweza kuunda, kubadilisha, kususpend au kufunga opportunity/package bila developer ku-edit code.

Package fields: name, minimum amount, maximum amount, currency, duration, projected/target outcome, risk category, status, terms, start/end date, eligibility na disclosure.

Important: x5 model iliyotajwa na owner inapaswa kuwekwa kama configurable calculation/target model na siyo hard-coded. Mfumo usi-present guaranteed returns bila legal review na factual basis. UI itumie terms kama *Projected Outcome*, *Target Performance*, *Historical Performance* kulingana na aina halisi ya product.

Example package calculation: ikiwa admin ame-configure multiplier ya 5, system inaweza ku-calculate projected value kama initial amount $\times$ 5. Hii ni calculation ya system, si guarantee ya faida.

Investment flow:

```
User → Trading Floor → View Opportunity  
→ View Terms & Risk Disclosure → Select Amount  
→ Confirm → Checkout/Wallet Payment  
→ Payment Verified → Investment Record Created  
→ Portfolio Updated → Status & Updates Tracked  
→ Completion/Settlement → Final Ledger Entry
```

Kila investment record iwe na unique ID, user ID, opportunity ID, amount, currency, status, timestamps, payment reference na audit trail.

7. ACCOUNT MANAGEMENT & WALLET

Dashboard inapaswa kuwa central control center ya user.

Overview

- Total Balance
- Wallet Balance
- Active Investments
- Portfolio Value
- Course Progress
- Recent Transactions
- Notifications
- Quick Actions

Wallet functions: deposit, payment for courses, investment funding, withdrawal request, transaction history, pending/approved/failed statuses.

Never use only a displayed balance: backend lazima iwe na double-entry style ledger au immutable transaction ledger ili balance ihesabiwe kutokana na transactions.

8. PROJECTS & VOLT SOCIETY

Projects section ni future vision ya Volt Trades. Hii si lazima iwe investment marketplace katika version ya kwanza; inaweza kuanza kama roadmap/showcase module.

Project categories: Shop, Community, Technology, Education, Events, Future Ventures.

Volt Shop: future e-commerce area ya products za Volt Trades: clothing, accessories, educational products, digital products na branded merchandise.

Volt Society: community ya watu wenye dreams, ambition, discipline na kiu ya mafanikio. Page iwe na mission, values, benefits, community updates na join/waitlist CTA.

Project status: Planned, Coming Soon, In Development, Active, Completed.

9. AUTHENTICATION, KYC & SECURITY

Registration: full name, email/phone, password, country, terms consent.

Authentication: email verification, secure password hashing, 2FA optional/required for financial actions, password reset, session management.

KYC: if the business model requires identity verification, build KYC status: Not Started, Pending, Approved, Rejected, Needs More Information.

Financial actions: withdrawals and high-risk account changes should support additional verification and admin/audit controls.

10. PAYMENT SYSTEM

Website lazima iwe na payment architecture yenye uwezo wa ku-support multiple gateways na manual payment methods bila kubadilisha frontend.

Recommended payment abstraction:

- Payment Intent
 - Select Gateway
 - Create Checkout/Payment Request
 - Redirect or API Payment
 - Webhook/Callback
 - Verify Transaction
 - Update Ledger
 - Grant Course Access OR Fund Investment
 - Send Notification

Payment types: Course Purchase, Wallet Deposit, Investment Funding, Withdrawal Request, Shop Purchase (future).

Gateway architecture: developer aweke payment service interface ili gateway inaweza kubadilishwa. Kwa Tanzania/East Africa, gateway itakayochaguliwa inapaswa kuthibitishwa kulingana na biashara, currency, settlement, API na compliance requirements.

Payment statuses: Initiated, Pending, Paid, Failed, Cancelled, Refunded, Under Review.

Webhook security: payment status isi-confirmwe na frontend pekee; backend lazima ithibitishe callback/webhook na payment provider.

11. ADMIN DASHBOARD

Admin panel iwe na role-based permissions.

```
ADMIN
  ■■■ Overview / KPIs
  ■■■ Users
  ■■■ KYC
  ■■■ Courses
  ■ ■■■ Categories
  ■ ■■■ Courses
  ■ ■■■ Lessons
  ■ ■■■ Enrollments
  ■■■ Trading Floor
  ■ ■■■ Opportunities
  ■ ■■■ Packages
  ■ ■■■ Investments
  ■ ■■■ Settlements
  ■■■ Payments
  ■ ■■■ Deposits
  ■ ■■■ Withdrawals
  ■ ■■■ Transactions
  ■ ■■■ Webhooks
  ■■■ Projects
  ■■■ Volt Society
  ■■■ Coupons / Promotions
  ■■■ Notifications
  ■■■ Support Tickets
  ■■■ Reports
  ■■■ Audit Logs
  ■■■ Settings
```

Admin roles: Super Admin, Finance Admin, Content Manager, Support Agent, Compliance/Review Officer.

12. DATABASE STRUCTURE

Suggested core entities:

Table	Purpose
users	User profile, authentication and status
roles / permissions	Role-based access control
courses	Course metadata, price and status
lessons	Course lessons and content
enrollments	User course access and progress
quizzes / results	Learning assessment

Table	Purpose
opportunities	Trading Floor products/packages
investments	User investment records
wallets	User wallet accounts
ledger_entries	Immutable financial movement records
payments	Payment intents and provider references
withdrawals	Withdrawal requests and statuses
projects	Project showcase/roadmap
community_members	Volt Society membership
notifications	System/user notifications
support_tickets	Customer support
audit_logs	Admin and sensitive actions

13. API & TECHNICAL ARCHITECTURE

Developer anaweza kuchagua stack kulingana na expertise, lakini architecture inapaswa kuwa modular.

Recommended: modern frontend (React/Next.js au equivalent), backend API (Node/Laravel/equivalent), relational database (PostgreSQL/MySQL), object storage for videos/documents, secure payment gateway integration, email/SMS provider, and monitoring.

Core API groups:

```

/api/auth
/api/users
/api/courses
/api/enrollments
/api/opportunities
/api/investments
/api/wallet
/api/payments
/api/withdrawals
/api/projects
/api/community
/api/notifications
/api/support
/api/admin

```

API endpoints zote za financial actions zitumie authentication, authorization, validation, idempotency na audit logging.

14. USER FLOWS

A. Course purchase:

```

Home → Learn Forex → Course Details → Buy Course
→ Login/Register → Checkout → Payment
→ Verified → Enrollment Created → Course Access

```

B. Investment:

Login → Trading Floor → Opportunity Details
→ Review Terms/Risk → Select Amount → Confirm
→ Payment/Wallet → Verified → Investment Created
→ Portfolio Updated → User Tracks Status

C. Withdrawal:

Dashboard → Wallet → Withdraw
→ Enter Amount & Method → Security Check
→ Request Created → Review/Approval
→ Payment Processing → Completed/Failed
→ Ledger Updated

D. Volt Society:

Projects → Volt Society → Learn About Community
→ Join / Waitlist → Create or Update Membership Record
→ Community Access (based on product rules)

15. UI/UX DESIGN SYSTEM

Brand direction: premium dark fintech + education platform.

Primary colors: deep black/charcoal background, white typography, electric green accent, neutral gray surfaces, clear green/red status states.

Typography: modern sans-serif with strong hierarchy. Headings bold and confident; body copy highly readable.

Components: responsive navbar, cards, charts, data tables, tabs, filters, progress bars, badges, modals, toast notifications, empty states and skeleton loaders.

Mobile: dashboard must work on mobile. Sidebar becomes bottom navigation or drawer. Financial actions must remain clear and accessible.

CTA language: Start Learning, Buy Course, Enter Trading Floor, Explore Opportunity, Invest Now, View Portfolio, Deposit, Withdraw, Join Volt Society.

16. NON-FUNCTIONAL REQUIREMENTS

- Responsive on desktop, tablet and mobile.
- Secure authentication and password hashing.
- Role-based admin access.
- Audit logs for financial and admin actions.
- Webhook verification for payment events.
- Database backups and disaster recovery plan.
- Rate limiting and brute-force protection.
- Input validation and server-side authorization.
- No sensitive secrets in frontend code.
- Fast page loading and optimized media/video delivery.
- SEO-ready public pages.
- Analytics and error monitoring.

17. DEVELOPMENT PHASES & ACCEPTANCE CRITERIA

Phase 1 — Foundation: brand, public pages, auth, database, admin base.

Phase 2 — Forex Academy: course catalogue, course detail, checkout, enrollment, progress.

Phase 3 — Wallet & Payments: gateway integration, ledger, deposits, payment verification.

Phase 4 — Trading Floor: opportunity management, investment records, portfolio dashboard.

Phase 5 — Projects: project pages, roadmap, Volt Shop placeholder/future module, Volt Society.

Phase 6 — Security & Launch: testing, penetration review, compliance review, backups, monitoring, production deployment.

Definition of Done: every public CTA works, every protected route is authenticated, payments are verified server-side, balances come from ledger logic, admin can manage content, and all critical flows are tested.

18. IMPORTANT COMPLIANCE & RISK REQUIREMENTS

Kwa sababu Volt Trades inahusisha elimu ya Forex, investment/trading opportunities na fedha za users, developer na business team wanapaswa kufanya legal/compliance review kabla ya ku-launch real-money investment products.

Website isiweke guarantee ya profit kama hakuna legal and factual basis ya kufanya hivyo. Mfumo wa x5 unaweza kuwekwa kama configurable projection/target calculation, lakini public claims lazima ziendane na product halisi, risk disclosures, regulatory requirements na data inayoweza kuthibitishwa.

Terms, Privacy Policy, Risk Disclosure, Refund Policy, KYC/AML procedures (inapohitajika), payment provider requirements na applicable financial regulations vinapaswa kuandaliwa kwa ushauri wa mtaalamu husika kabla ya public launch.

Final product principle: Build Volt Trades as a scalable ecosystem, not a single-page investment website. The architecture must support education, accounts, payments, projects and community as connected but independently manageable modules.

VOLT TRADES
LEARN. INVEST. BUILD.
